

THIS IS TO CERTIFY THAT

Creeds Farm Living and Learning Centre

has contributed to the Greenfleet biodiverse program.

Greenfleet will plant 38 native trees* to establish a biodiverse forest and offset 10 tonnes of CO₂-e.

As well as offsetting greenhouse gas, this action is helping to improve water quality, reduce soil degradation and provide essential habitat for native wildlife.

Thank you for doing what's best for Australia – offsetting emissions with Greenfleet, Australia's most respected source of biodiverse native carbon offsets.

* This number of trees is a reasonable estimate of the number of trees required to be initially planted to sequester the total quantity of carbon purchased and takes into account that not all trees initially planted will survive due to the natural survival rate of trees. Accordingly, trees that do not survive following initial plantation may not necessarily be replanted. Greenfleet's commitment to recapture carbon on behalf of our supporters involves the management of native forests across all our planting sites. Greenfleet's forest pool is forecast to meet its overall carbon commitments to supporters

Thankyou
